

CUSTOM MOLDED URETHANE PRODUCTS

As an extension of Seco Machine, our focus is to provide quality molded urethane parts, exceptional delivery and excellent service. We combine the latest advances in polymer science, expert engineering and state-of-the-art tooling design to produce custom-molded urethane products, from prototype through production, for industrial and commercial customers.

OUR CAPABILITIES

Our tools, skills, engineering design capabilities and experience shape the flexible solutions we offer through intermediary and end products of the highest quality.

We provide urethanes with a wide range of properties and have capabilities to bond urethane to other materials. We have extensive experience in machining molds of nearly any shape or size. We offer standard colors and also provide color match capabilities to meet the needs of your project.

We continuously strive to improve our product quality, processes and, ultimately, the satisfaction of our customers. The thread of this philosophy runs through our company where we engineer and manufacture quality and performance into every product.

CORE COMPETENCIES

Our core competencies are aligned with the current and future needs of our customers. As one of the region's most comprehensive machine shops, Seco Machine has a diverse range of equipment required to produce tight-tolerance, high quality parts.

Our dedicated quality control and inspection teams diligently review and precisely verify the quality of our parts prior to shipment. Our state-of-the-art equipment includes robotic feed machines with the capability to manage unmanned processes, increasing production rates to maximize productivity and availability.

CUSTOM MOLDED URETHANE PRODUCTS

URETHANE CAPABILITIES

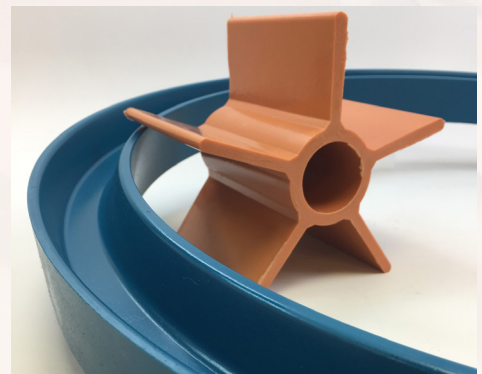

Our offerings:

- Full product design and development
- Full chemistry and physical testing solutions
- Material development support, including substituting urethane for more costly materials
- Custom mold design and manufacture, including rapid prototype services
- Fully automated finishing, trimming, and grinding
- Bonding urethane to a wide variety of other materials
- In-house mold-making capabilities available at our CNC molding division
- Polyurethane products available in a wide range of hardness specifications
- Light assembly
- Flexible packaging solutions
- Customizable laser engraving

OUR FACILITY

- 120,000 square-foot facility
- Furnished with state-of-the-art processing equipment
- Controlled environment
- Warehouse for inventory
- Local pick-up and delivery options available
