

Wheel Services

WHY CHOOSE STUCKI?

A. Stucki delivers comprehensive freight car wheel services to a diverse customer base, including Class 1 railroads, utilities, repair companies, freight car builders, and private car owners.

Wheel Set & Axle Services

We specialize in re-profiling freight car and locomotive wheel sets and axles.

Axle Sizes

Our wheel services locations produce both new and reconditioned axles in all sizes.

Enhanced Quality

We exceed AAR mandated standards by improving quality consistency, repeatability, and capabilities.

Improved Efficiency

Our high-capacity facilities enable shorter lead times and reduced inventory needs for our customers.

STUCKI WHEEL SERVICES ADVANTAGES

Wheel Salvage & Real-time Feedback

Our in-process technology maximizes wheel salvage rates while providing real-time feedback for improved efficiency.

Bearing Reconditioning

We offer AAR-approved bearing reconditioning services and are authorized by OEMs.

Nationwide Locations

Our wheel services are conveniently located throughout the United States.

ADVANCED TECHNIQUES FOR OPTIMAL PERFORMANCE

Our remanufacturing process for freight car, locomotive, and industrial roller bearings ensures superior quality through complete control of work holding pressures—resulting in a more accurate central axis—along with real-time assembly data and consistent surface finishes. Using coolant during cutting prevents rust and maintains temperature stability, while built-in traceability allows us to optimize each component's impact on the wheelset, enhancing performance and efficiency.

COMPREHENSIVE RECONDITIONING SERVICES

A. Stucki Company provides reconditioning services for a variety of rolling stock, including freight cars, locomotives, and industrial equipment. This comprehensive service offering caters to the diverse needs of the rail industry.
