

Vacuum Relief Valves

1½-Inch Flanged Vacuum Relief Valve
Part Number: VVN15S6RA112A

TANK CAR

AAR approved flanged and threaded non-cycling vacuum relief valves allow the railcar to relieve pressure built up by temperature fluctuations from loading/unloading or transit.

FEATURES & BENEFITS

- AAR Approval # E-009034
- Available in 1½” and 2½” sizes
- Threaded and flanged versions available
- Cap and stem function independently
- 304 Stainless Steel body and shield cap
- Available in typical AAR recommended pressure setting or user-defined settings
- Non-cycling feature prevents valve from activating/cycling and product release in case of rollover derailment
- Full-faced gasket prevents failure from positive pressure
- Hex design (underneath shield on TEV-1 models) allows for easy installs
- Multiple gasket material options. Buna-N, EPDM, Neoprene and Viton A. Other gasket materials available upon request

The tamper-resistant design contains an extra-long shield, preventing access to the hex area, and a cable seal preventing tampering with screws.
